Experiment No. 11: Image Rotation by 180 Degrees Clockwise

Aim: To rotate the given image by 180 degrees clockwise using Python and OpenCV.

Program (Google Colab):

```
import cv2
import matplotlib.pyplot as plt
from google.colab import files

# Upload an image
uploaded = files.upload()
image_path = next(iter(uploaded))

# Read the image
img = cv2.imread(image_path)
img = cv2.cvtColor(img, cv2.COLOR_BGR2RGB)

# Rotate image by 180 degrees clockwise
rotated = cv2.rotate(img, cv2.ROTATE_180)

# Display original and rotated images
plt.figure(figsize=(10, 5))

plt.subplot(1, 2, 1)
plt.imshow(img)
plt.title("Original Image")
plt.axis("off")
```

```
plt.subplot(1, 2, 2)

plt.imshow(rotated)

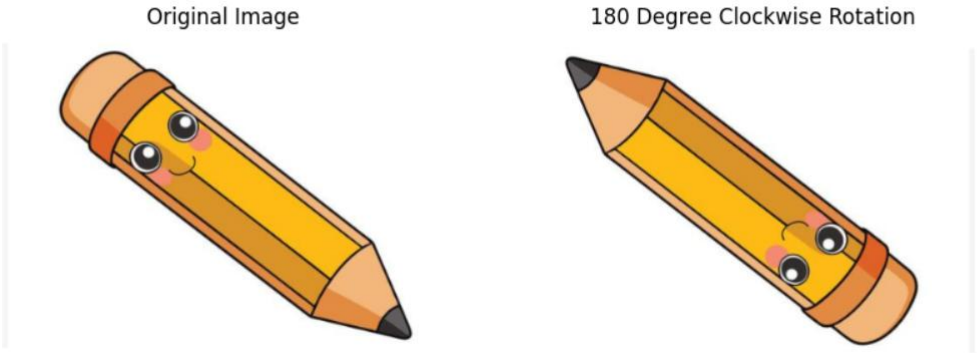

plt.title("180 Degree Clockwise Rotation")

plt.axis("off")

plt.show()
```

OUTPUT:

```
Choose Files  Screenshot ...132927.png
Screenshot 2026-10-12 132927.png(image/png) - 85741 bytes, last modified: 10/12/2026 - 100% done
Saving Screenshot 2026-10-12 132927.png to Screenshot 2026-10-12 132927 (4).png
```

Expected Output:

1. Original image.
2. Image rotated by 180 degrees clockwise.

Result: The given image was successfully rotated by 180 degrees clockwise using Python and OpenCV's cv2.rotate() function.
